

The Solar System

Find the nine names in the grid. They run across, down and diagonally, always forwards. Then colour the drawings.

Mercury

Venus

Earth

The Moon

Mars

Jupiter

Saturn

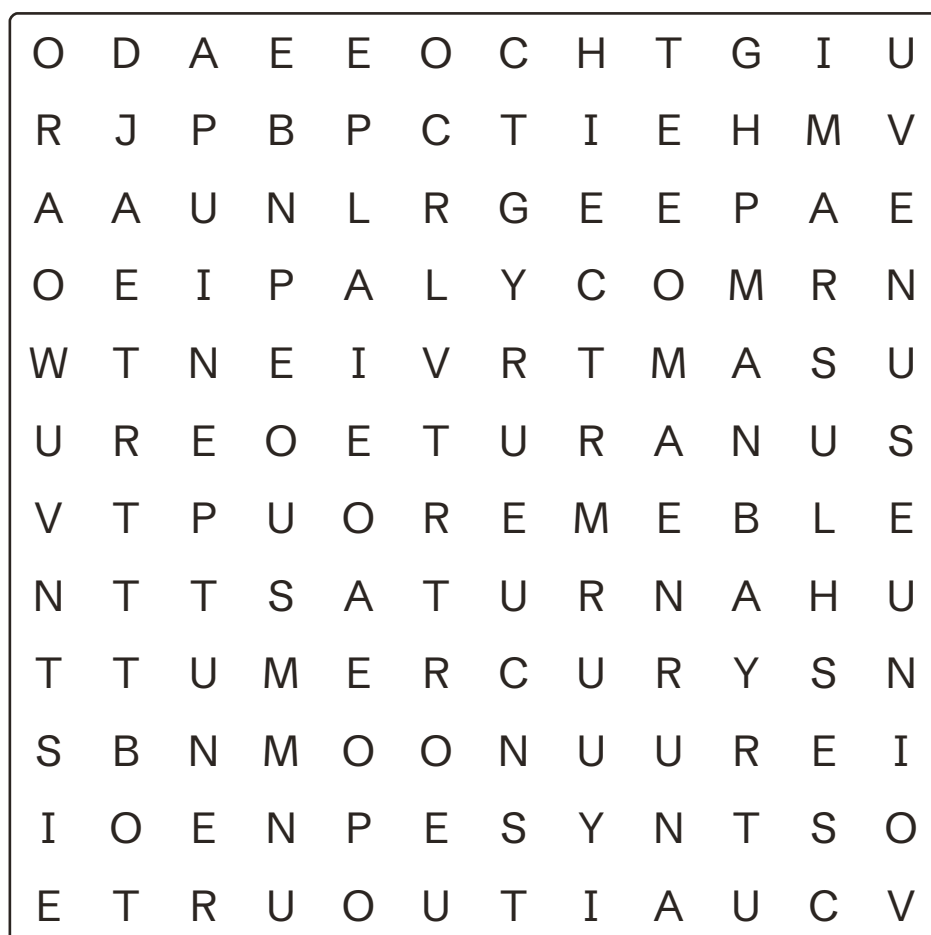

Uranus

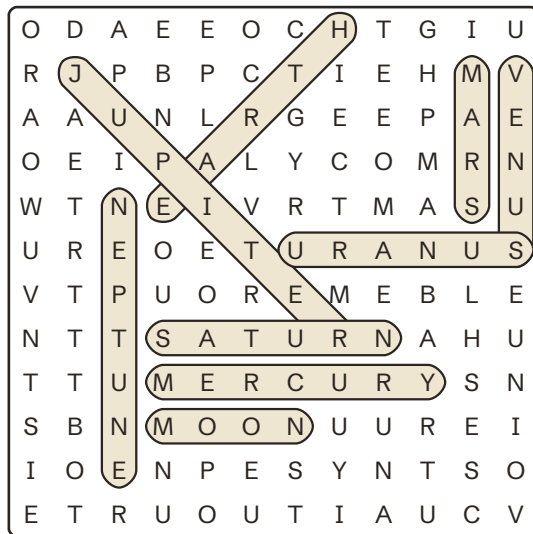

Neptune

THE NAMES

- ☐ EARTH
- ☐ JUPITER
- ☐ MARS
- ☐ MERCURY
- ☐ MOON
The Moon
- ☐ NEPTUNE
- ☐ SATURN
- ☐ URANUS
- ☐ VENUS

The Solar System: answers and facts

Each fact below is a sentence we wrote from the Wikipedia page named under it. All pages were read on 26 September 2026.

The drawings are drawn in code by ARLing, line by line, with no photographs and no AI generated images.

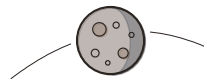

The coloured drawings show one way to colour them; any colours are fine.

The Sun (not in this grid)

The Sun holds about 99.86% of all the mass in the Solar System.

en.wikipedia.org/wiki/Sun

Mercury

Mercury is the smallest planet and the closest to the Sun; one lap takes about 88 Earth days.

[en.wikipedia.org/wiki/Mercury_\(planet\)](https://en.wikipedia.org/wiki/Mercury_(planet))

Venus

Venus is the hottest planet, and it spins the opposite way to most planets, Earth included.

en.wikipedia.org/wiki/Venus

Earth

Earth is the only world known to harbour life, and its ocean covers about 71% of the crust.

en.wikipedia.org/wiki/Earth

The Moon

The Moon always turns the same side to Earth, from an average distance of about 384,400 km.

en.wikipedia.org/wiki/Moon

Mars

Mars looks red because its surface is rich in iron oxide.

en.wikipedia.org/wiki/Mars

Jupiter

Jupiter has nearly 2.5 times the mass of all the other planets put together.

en.wikipedia.org/wiki/Jupiter

Saturn

Saturn is the only planet less dense than water, and its rings are mostly water ice.

en.wikipedia.org/wiki/Saturn

Uranus

Uranus was the first planet found with the help of a telescope, by William Herschel in 1781.

en.wikipedia.org/wiki/Uranus

Neptune

Neptune has the strongest winds of any planet, up to about 2,100 km/h.

en.wikipedia.org/wiki/Neptune
