

Minerals and Gems

Find the ten names in the grid. They run across, down and diagonally, always forwards. Then colour the drawings.

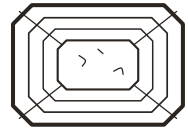

Quartz

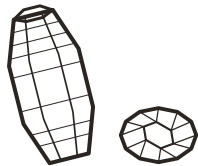

Diamond

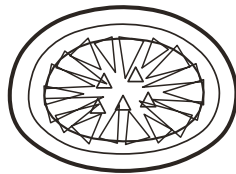

Ruby

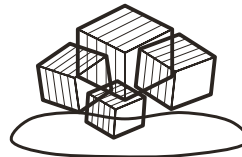

Emerald

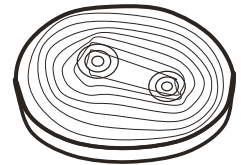

Sapphire

Amethyst

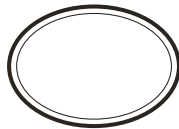

Pyrite

Malachite

Turquoise

Opal

THE NAMES

☐ AMETHYST

☐ DIAMOND

☐ EMERALD

☐ MALACHITE

☐ OPAL

☐ PYRITE

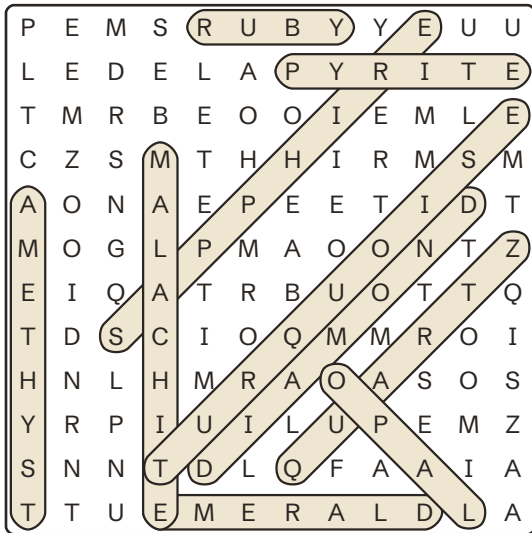

☐ QUARTZ

☐ RUBY

☐ SAPPHIRE

☐ TURQUOISE

Minerals and Gems: answers and facts

Each fact below is a sentence we wrote from the Wikipedia page named under it. All pages were read on 26 September 2026.

The drawings are drawn in code by ARLing, line by line, with no photographs and no AI generated images.

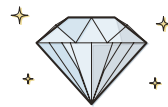

The coloured drawings show one way to colour them; any colours are fine.

Quartz

An ideal quartz crystal is a six-sided prism with a pyramid-like point at each end.

en.wikipedia.org/wiki/Quartz

Diamond

Diamond is a form of carbon, like graphite; most natural diamonds are 1 to 3.5 billion years old.

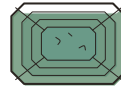

en.wikipedia.org/wiki/Diamond

Ruby

A ruby is red corundum, coloured by chromium; its name comes from ruber, Latin for red.

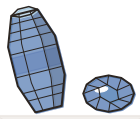

en.wikipedia.org/wiki/Ruby

Emerald

Emerald is green beryl; the mossy flaws inside it are called jardin, French for garden.

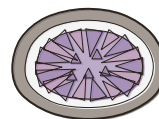

en.wikipedia.org/wiki/Emerald

Sapphire

Blue is the best-known colour, but sapphires also occur in yellow, green, purple, pink and more.

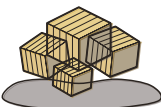

en.wikipedia.org/wiki/Sapphire

Amethyst

Amethyst is a violet variety of quartz; its Greek name means not intoxicated.

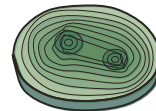

en.wikipedia.org/wiki/Amethyst

Pyrite

Pyrite is known as fool's gold; its Greek name means a stone which strikes fire.

en.wikipedia.org/wiki/Pyrite

Malachite

Malachite, a green copper mineral, was used as a pigment in green paints from antiquity until about 1800.

en.wikipedia.org/wiki/Malachite

Turquoise

The word turquoise comes from the Old French for Turkish; ancient Egyptians mined it in Sinai.

en.wikipedia.org/wiki/Turquoise

Opal

Opal holds water, 3% to 21% of its weight, and most precious opal comes from Australia.

en.wikipedia.org/wiki/Opal
